Engineering and Design
HYDROPOWER

Table of Contents

Subject	Paragraph	Page
CHAPTER 1 INTRODUCTION		
Purpose	1-1	1-1
Applicability	1-2	1-1
References	1-3	1-1
Bibliography	1-4	1-2
Glossary	1-5	1-2
Conversion Factors	1-6	1-2
Hydroelectric Design Centers	1-7	1-2
Organization of a Power Study	1-8	1-2
Hydropower Reports	1-9	1-4
Small Hydro Projects	1-10	1-4
Coordination with Other Agencies	1-11	1-4
CHAPTER 2 GENERAL FEATURES OF HYDROELECTRIC DEVELOPMENT AND THE ROLE OF HYDROPOWER		
Introduction	2-1	2-1
Power System Operation	2-2	2-1
Organization of the Power Industry	2-2a	2-1
Definitions	2-2b	2-2
Power Loads	2-2c	2-3
Power Resources	2-2d	2-4
Reserves	2-2e	2-12
Meeting Loads With Resources	2-2f	2-12
The Use of Hydropower	2-2g	2-14
Types of Hydropower Projects	2-3	2-19
General	2-3a	2-19
Run-of-River Projects	2-3b	2-20
Pondage Projects	2-3c	2-21
Storage Projects	2-3d	2-22

Subject	Paragraph	Page
Pumped-Storage Projects	2-3e	2-23
Reregulating Projects	2-3f	2-25
Components of Hydro Projects	2-4	2-26
General	2-4a	2-26
Dam	2-4b	2-26
Reservoir	2-4c	2-27
Intake	2-4d	2-27
Penstock	2-4e	2-27
Surge Tanks	2-4f	2-30
Powerhouse	2-4g	2-31
Draft Tube and Tailrace	2-4h	2-34
Components of a Powerhouse	2-5	2-34
General	2-5a	2-34
Spiral Case and Wicket Gates	2-5b	2-36
Turbine	2-5c	2-36
Generator	2-5d	2-36
Governor	2-5e	2-39
Buswork, Circuit Breakers, and		
Disconnects	2-5f	2-43
Transformers	2-5g	2-44
Switchyard	2-5h	2-44
Control Equipment	2-5i	2-44
Auxiliary Equipment	2-5j	2-44
Types of Turbines	2-6	2-46
General	2-6a	2-46
Impulse Turbines	2-6b	2-48
Reaction Turbines	2-6c	2-50
Turbine Selection	2-6d	2-61
 CHAPTER 3 LOAD RESOURCE ANALYSIS		
Introduction	3-1	3-1
General	3-1a	3-1
Scope	3-1b	3-1
Purpose of Analysis	3-2	3-1
Scope of Analysis	3-3	3-2
General	3-3a	3-2
Major Steps	3-3b	3-2
Display of Analysis	3-3c	3-6
Authority and Responsibility of the		
Corps of Engineers	3-4	3-6
Sources of Forecast Data	3-5	3-7
General	3-5a	3-7
Regional Reliability Council Reports . .	3-5b	3-7

31 Dec 1985

Subject	Paragraph	Page
Regional Power Marketing Administrations	3-5c	3-10
Other DOE Offices	3-5d	3-12
Utilities	3-5e	3-13
National Hydropower Study	3-5f	3-13
Electric Power Research Institute (EPRI)	3-5g	3-14
States	3-5h	3-14
Other Sources	3-5i	3-14
Load Forecasting Methods	3-6	3-15
Guidelines for Selecting a Forecast	3-7	3-15
Variations in Load Forecasts	3-8	3-17
Level of Conservation in the Forecast . . .	3-9	3-18
Level of Detail Required in Reports	3-10	3-19
General	3-10a	3-19
Reconnaissance Phase Studies	3-10b	3-19
Detailed Study Phase	3-10c	3-20
Basic Steps	3-10d	3-20
Peak Load vs. Energy Load Analysis . .	3-10e	3-21
Additional Information	3-10f	3-21
Load Forecast Requirements	3-10g	3-26
Analysis of Energy Displacement Projects	3-11	3-27
Marketability Analysis	3-12	3-27
Flood Control Act of 1944	3-12a	3-27
Marketability Reports	3-12b	3-27
Treatment of Small Projects	3-12c	3-28
 CHAPTER 4 HYDROLOGIC DATA PREPARATION		
Introduction	4-1	4-1
Streamflow Records	4-2	4-1
General	4-2a	4-1
Data Collection	4-2b	4-1
WATSTORE	4-2c	4-2
Data Accuracy and Reliability	4-2d	4-3
Data from Other Sources	4-2e	4-4
Historical Records Adjustment	4-3	4-4
General	4-3a	4-4
Natural and Modified Streamflow		
Conditions	4-3b	4-4
Estimating Flow at a Dam site	4-3c	4-5
Extension of Historical Records . . .	4-3d	4-5
Future Flow Depletions	4-3e	4-6
Types of Streamflow Data used in Power		
Studies	4-4	4-6
General	4-4a	4-6

Subject	Paragraph	Page
Mean Daily Data	4-4b	4-6
Mean Weekly and Monthly Data	4-4c	4-6
Flow-Duration Curves	4-4d	4-8
Seasonal Flow Distribution	4-4e	4-8
Other Hydrologic Data	4-5	4-8
Introduction	4-5a	4-8
Tailwater Rating Curves	4-5b	4-8
Reservoir Storage-Elevation and Area-Elevation Data	4-5c	4-13
Sedimentation Data	4-5d	4-14
Water Quality Data	4-5e	4-14
Downstream Flow Requirements	4-5f	4-14
Water Surface Fluctuation Studies	4-5g	4-15
Losses	4-5h	4-15
 CHAPTER 5 DETERMINING ENERGY POTENTIAL		
Introduction	5-1	5-1
Purpose and Scope	5-1a	5-1
Relationship of Energy Analysis to Selection of Plant Size	5-1b	5-1
Types of Hydroelectric Energy	5-2	5-1
General	5-2a	5-1
Average Annual Energy	5-2b	5-2
Firm Energy	5-2c	5-2
Secondary Energy	5-2d	5-3
The Water Power Equation	5-3	5-3
General	5-3a	5-3
Flow	5-3b	5-5
Head	5-3c	5-5
Efficiency	5-3d	5-6
General Approaches to Estimating Energy	5-4	5-6
Introduction	5-4a	5-6
Flow-Duration Curve Method	5-4b	5-7
Sequential Streamflow Routing (SSR) Method	5-4c	5-7
Hybrid Method	5-4d	5-8
Selection of Method	5-4e	5-8
Turbine Characteristics and Selection	5-5	5-10
General	5-5a	5-10
Useable Head Range	5-5b	5-10
Design and Rated Heads	5-5c	5-11
Minimum Discharge	5-5d	5-18
Efficiency	5-5e	5-18

Subject	Paragraph	Page
Turbine Selection	5-5f	5-20
Matching Turbine to Generator	5-5g	5-21
Data Requirements	5-6	5-25
Introduction	5-6a	5-25
Routing Interval	5-6b	5-26
Streamflow Data	5-6c	5-27
Length of Record	5-6d	5-27
Streamflow Losses	5-6e	5-29
Reservoir Characteristics	5-6f	5-29
Tailwater Data	5-6g	5-30
Installed Capacity	5-6h	5-31
Turbine Characteristics	5-6i	5-32
KW/cfs Curve	5-6j	5-32
Efficiency	5-6k	5-33
Head Losses	5-6l	5-35
Non-Power Operating Criteria	5-6m	5-37
Channel Routing Characteristics	5-6n	5-38
Generation Requirements	5-6o	5-39
Flow-Duration Method	5-7	5-42
Introduction	5-7a	5-42
Data Requirements	5-7b	5-42
Develop Flow-Duration Curve	5-7c	5-42
Adjust Flow-Duration Curve	5-7d	5-42
Determine Flow Losses	5-7e	5-44
Develop Head Data	5-7f	5-45
Select Plant Size	5-7g	5-45
Define Usable Flow Range and Define		
Head-Duration Curve	5-7h	5-48
Derive Power-Duration Curve	5-7i	5-50
Compute Average Annual Energy	5-7j	5-54
Compute Dependable Capacity;		
Run-of-River Projects Without Pondage	5-7k	5-54
Compute Dependable Capacity;		
Pondage Projects	5-7l	5-55
Adjustment for Storage Effects	5-7m	5-60
Treatment of Efficiency	5-7n	5-60
Computer Models of Duration-Curve		
Analysis	5-7o	5-64
Sequential Streamflow Routing (SSR) Method	5-8	5-64
General Approach	5-8a	5-64
Application of Sequential Analysis	5-8b	5-65
Application of SSR to Projects Without Power		
Storage	5-9	5-66
General	5-9a	5-66

Subject	Paragraph	Page
Data Requirements	5-9b	5-67
The Routing Procedure	5-9c	5-67
Other Considerations	5-9d	5-70
Example	5-9e	5-70
Use of Computer Models	5-9f	5-70
Application of SSR to Projects with Power		
Storage	5-10	5-71
Introduction	5-10a	5-71
Data Requirements	5-10b	5-73
Regulation of Power Storage to		
Increase Firm Energy	5-10c	5-73
Critical Period	5-10d	5-75
Preliminary Firm Energy Estimate	5-10e	5-77
The Sequential Routing Procedure	5-10f	5-77
Determining Firm Energy	5-10g	5-87
Average Annual Energy	5-10h	5-89
Power Rule Curves	5-11	5-91
General	5-11a	5-91
Project Operation Using Power Rule		
Curves	5-11b	5-93
Computing Average Energy Using Rule		
Curves	5-11c	5-95
Multiple-Purpose Storage Operation	5-12	5-97
General	5-12a	5-97
Storage Zones	5-12b	5-97
Conservation Storage Zone	5-12c	5-98
Fixed Flood Control Zone	5-12d	5-98
Joint-Use Storage	5-12e	5-99
Joint-Use Storage With Snowmelt Runoff	5-12f	5-103
Flood Control Storage Requirements	5-12g	5-103
Non-Power Conservation Requirements	5-12h	5-104
Multiple-Purpose Operational Studies	5-12i	5-106
Alternative Power Operation Strategies	5-13	5-107
Introduction	5-13a	5-107
Maximize Average Annual Energy	5-13b	5-107
Maximize Dependable Capacity	5-13c	5-111
Variable Draft	5-13d	5-114
System Power Reserve	5-13e	5-116
Composite Energy Operation	5-13f	5-118
System Analysis	5-14	5-118
Introduction	5-14a	5-118
Storage Effectiveness	5-14b	5-119
General Approach	5-14c	5-120
System Critical Period	5-14d	5-121

31 Dec 1985

Subject	Paragraph	Page
Estimate System Firm Energy Loads . . .	5-14e	5-121
Examples of Storage Effectiveness . . .	5-14f	5-122
Discussion of Storage Effectiveness		
Examples	5-14g	5-130
Multiple-Purpose Operating		
Considerations	5-14h	5-132
Coordination with Other Entities	5-14i	5-133
Sources of Further Information	5-14j	5-133
Examples of Existing Hydropower		
Systems	5-14k	5-134
Hybrid Method	5-15	5-134
Introduction	5-15a	5-134
Data Requirements	5-15b	5-134
Methodology	5-15c	5-135
Models	5-15d	5-136
 CHAPTER 6 POWERPLANT SIZING		
Introduction	6-1	6-1
Purpose and Scope	6-1a	6-1
Definitions	6-1b	6-1
Procedure for Sizing Powerplants	6-2	6-3
General	6-2a	6-3
Basic Steps	6-2b	6-4
Treatment of Multiple Alternatives . . .	6-2c	6-5
Power System Requirements and Marketability		
Considerations	6-3	6-6
General	6-3a	6-6
Operating Modes	6-3b	6-7
Other Considerations	6-3c	6-10
Physical Constraints	6-4	6-12
Environmental and Non-Power Operating		
Constraints	6-5	6-13
Types of Constraints	6-5a	6-13
Analysis of Constraints	6-5b	6-13
Seasonality of Operating Constraints . .	6-5c	6-14
Soft versus Hard Constraints	6-5d	6-14
Reregulating Dam	6-5e	6-14
Selection of Alternative Power		
Installations	6-6	6-14
Introduction	6-6a	6-14
General Considerations	6-6b	6-14
Run-of-River Projects	6-6c	6-16
Projects with Pondage or Storage	6-6d	6-18

Subject	Paragraph	Page
Staged Installation	6-6e	6-19
Size and Number of Units	6-6f	6-20
Examples of Selecting Size and Number of Units	6-6g	6-21
Turbine Selection	6-6h	6-24
Dependable Capacity	6-7	6-24
General	6-7a	6-24
Basic Approach	6-7b	6-25
Methods for Determining Dependable Capacity	6-7c	6-26
Critical Month Method	6-7d	6-26
Firm Plant Factor Method	6-7e	6-27
Specified Availability Method	6-7f	6-28
Average Availability Method	6-7g	6-28
Selection of Method	6-7h	6-31
Sustained Capacity	6-7i	6-32
Dependable Capacity of Pumped-Storage Projects	6-7j	6-34
Intermittent Capacity	6-7k	6-35
Flexibility	6-7l	6-36
Measures for Firming Up Peaking Capacity	6-8	6-37
General	6-8a	6-37
Pondage	6-8b	6-37
Reregulating Dam	6-8c	6-41
Reversible Units	6-8d	6-43
Hourly Operation Studies	6-9	6-44
General	6-9a	6-44
Data Requirements	6-9b	6-46
Basic Approach	6-9c	6-50
Evaluation Tools	6-9d	6-55
Examples of Hourly Studies	6-9e	6-56
POWRSYM Hydro-Thermal System Model	6-9f	6-56

CHAPTER 7 EVALUATING PUMPED-STORAGE HYDROPOWER

Introduction	7-1	7-1
Purpose and Scope	7-1a	7-1
Basic Concept of Pumped-Storage	7-1b	7-2
Types of Pumped-Storage Projects	7-1c	7-5
Existing Pumped-Storage Projects	7-1d	7-8
General Characteristics of Off-Stream Pumped-Storage Projects	7-2	7-8

Subject	Paragraph	Page
Introduction	7-2a	7-8
Desirable Site Characteristics	7-2b	7-14
Operating Cycle	7-2c	7-17
Storage Requirements	7-2d	7-19
Plant Size	7-2e	7-22
Heads	7-2f	7-22
Pump-Turbine Performance	7-2g	7-24
Rated Capacity	7-2h	7-28
Plant Operating Characteristics	7-2i	7-28
Cycle Efficiency	7-2j	7-30
Charge/Discharge Ratio	7-2k	7-32
Reliability and Availability	7-2l	7-32
Size and Number of Units	7-2m	7-33
Plant Factor	7-2n	7-33
Lower Reservoir Characteristics	7-2o	7-35
Penstock Head Losses	7-2p	7-36
Other Factors	7-2q	7-37
Overall Study Procedure	7-3	7-38
Introduction	7-3a	7-38
Define Site and Plant Characteristics	7-3b	7-39
Sequential Streamflow Routing and Related Studies	7-3c	7-41
Economic Analysis	7-3d	7-42
Sequential Routing Studies	7-4	7-44
General	7-4a	7-44
Data Requirements	7-4b	7-44
Analysis of Storage Requirements	7-4c	7-45
Analysis of Lower Reservoirs	7-4d	7-45
Unsteady Flow Analysis	7-4e	7-46
Economic Analysis	7-5	7-46
Introduction	7-5a	7-46
Define Without-Project Conditions	7-5b	7-46
Develop Plant and System Operating Characteristics	7-5c	7-50
Compute System Energy Costs	7-5d	7-52
Define With-Project Conditions	7-5e	7-52
Describe Pumped-Storage Project Characteristics	7-5f	7-53
Determine With-Project System Energy Costs	7-5g	7-55
Determine System Energy Benefits	7-5h	7-55
Determine Capacity Benefits	7-5i	7-57
Flexibility Benefits	7-5j	7-57
Sensitivity Analyses	7-5k	7-57

Subject	Paragraph	Page
Analysis of Pump-Back Projects	7-6	7-58
General	7-6a	7-58
Objectives of Pump-Back Operation . . .	7-6b	7-58
Basic Procedure	7-6c	7-60
Base Period-of-Record SSR Analysis . . .	7-6d	7-61
Define Project's Dependable Capacity		
Without Pump-Back	7-6e	7-61
Define the Operating Cycle for		
Pump-Back Operation	7-6f	7-62
Make Worst-Case Hourly SSR Routings . .	7-6g	7-62
Compute Pump-Back Requirements for		
Period-of-Record	7-6h	7-63
Economic Analysis	7-6i	7-64
Additional Hourly SSR Studies	7-6j	7-67
Unit Characteristics	7-6k	7-67
Alternative Project Configurations		
and Sensitivity Studies	7-6l	7-68
Special Problems	7-7	7-68
General	7-7a	7-68
Screening Studies	7-7b	7-68
Seasonal Pumped-Storage	7-7c	7-69
Underground Pumped-Storage	7-7d	7-69
Multiple-Purpose Operation	7-7e	7-70
Environmental Problems	7-7f	7-70
The National Hydropower Study	7-7g	7-71
 CHAPTER 8 ESTIMATING POWERHOUSE COSTS		
Introduction	8-1	8-1
Types of Cost Estimates	8-2	8-1
General	8-2a	8-1
Reconnaissance Reports	8-2b	8-1
Feasibility Reports	8-2c	8-1
Design Memoranda	8-2d	8-2
Construction Costs	8-3	8-2
Introduction	8-3a	8-2
Major Powerhouse Components	8-3b	8-2
Contingencies	8-3c	8-4
Sources of Powerhouse Cost Data	8-3d	8-4
Investment Cost	8-4	8-6
General	8-4a	8-6
Construction Costs	8-4b	8-6
Project Engineering and Design		
(E&D) Costs	8-4c	8-6

Subject	Paragraph	Page
Supervision and Administration		
(S&A) Costs	8-4d	8-6
Interest During Construction	8-4e	8-6
Investment Cost	8-4f	8-7
Inflation During Construction	8-4g	8-7
Annual Costs	8-5	8-7
General	8-5a	8-7
Interest and Amortization	8-5b	8-8
Operation and Maintenance	8-5c	8-9
Replacement Costs	8-5d	8-12
Pumping Costs	8-5e	8-13
Transmission Costs	8-6	8-15
Updating Cost Estimates	8-7	8-16
General	8-7a	8-16
Construction Cost Indexes	8-7b	8-17
Updating O&M Costs	8-7c	8-17
Updating Replacement Costs	8-7d	8-19
Example Powerhouse Cost Analysis	8-8	8-20
Introduction	8-8a	8-20
Price Level Adjustment	8-8b	8-20
Contingencies	8-8c	8-20
Inflation Adjustment	8-8d	8-20
E&D and S&A	8-8e	8-23
Interest During Construction	8-8f	8-23
Annual Cost	8-8g	8-23
 CHAPTER 9 ECONOMIC EVALUATION OF HYDROPOWER PROJECTS		
Introduction	9-1	9-1
Conceptual Basis for Hydropower Benefits	9-2	9-1
Basis for Measuring Benefits	9-2a	9-1
Actual or Simulated Market Price	9-2b	9-2
Cost of the Most Likely Thermal		
Alternative	9-2c	9-4
Need for Power	9-2d	9-4
Nonstructural Alternative	9-2e	9-5
Use of Hydro as an Alternative	9-2f	9-7
Overall Approach in Computing Hydropower		
Benefits	9-3	9-7
Hydro Plant Output	9-3a	9-7
Computing Benefits	9-3b	9-8
Period of Analysis	9-3c	9-8
With- and Without-Project Conditions	9-4	9-9
General	9-4a	9-9

Subject	Paragraph	Page
Identification of the System	9-4b	9-10
Individual Years to be Analyzed	9-4c	9-10
Comparability	9-4d	9-11
Alternative Thermal Plant Method	9-5	9-14
Basic Approach	9-5a	9-14
Capacity Value	9-5b	9-15
Capacity Value Adjustment	9-5c	9-15
Energy Value	9-5d	9-18
Energy Value Adjustment	9-5e	9-18
Real Fuel Cost Escalation	9-5f	9-22
Transmission Costs and Losses	9-5g	9-25
Selection of the Most Likely Alternative	9-5h	9-27
Size of Thermal Alternative	9-5i	9-33
Combination of Alternatives	9-5j	9-34
Sources of Power Values	9-5k	9-35
Cost-Indexing Power Values	9-5l	9-38
Energy Displacement Method	9-6	9-38
General	9-6a	9-38
Computerized Production Cost Model	9-6b	9-38
Manual Load-Duration Curve	9-6c	9-38
Time-Related Factors	9-6d	9-39
Selection of Approach	9-6e	9-39
Comparison with Alternative Thermal		
Plant Method	9-6f	9-39
Combination of Methods	9-6g	9-42
Annual Costs	9-7	9-45
Scoping of Hydro Projects	9-8	9-46
General	9-8a	9-46
Types of Alternative Plants	9-8b	9-46
Examples of Plant Sizing	9-8c	9-48
Selection of Recommended Plan	9-8d	9-56
Financial Feasibility	9-9	9-56
Special Problems	9-10	9-58
Introduction	9-10a	9-58
Minimum Provisions for Future Power		
Installations	9-10b	9-58
Expansion of Existing Powerplants	9-10c	9-59
Off-Stream Pumped-Storage Projects	9-10d	9-62
Reservoir System Power Benefits	9-10e	9-63
Staging of Hydro Projects	9-10f	9-63
Reallocation of Storage	9-10g	9-65
Use of Falling Water Charges	9-10h	9-66
Design Analyses	9-10i	9-66
Delays to On-line Dates	9-10j	9-68

Subject	Paragraph	Page
Cost of Outages	9-10k	9-69
Conservation	9-10l	9-69
Plants Smaller Than 25 MW	9-10m	9-70
Non-Federally Financed Projects	9-10n	9-70
Firm and Secondary Energy	9-10o	9-71

APPENDIXES

APPENDIX A POWER STUDY CHECKLIST

Introduction	A-1	A-1
Checklist	A-2	A-1

APPENDIX B LOAD FORECASTING METHODS

General	B-1	B-1
Types of Models	B-2	B-1
Introduction	B-2a	B-1
Trend Analysis	B-2b	B-2
End-Use Analysis	B-2c	B-2
Econometrics	B-2d	B-3
Forecasting Accuracy	B-3	B-5

APPENDIX C COMPUTER MODELS FOR POWER STUDIES

Introduction	C-1	C-1
Flow Duration Models	C-2	C-1
General	C-2a	C-1
HYDUR	C-2b	C-2
NAVOP	C-2c	C-3
Sequential Streamflow Routing Models	C-3	C-4
General	C-3a	C-4
HEC-5	C-3b	C-5
SUPER	C-3c	C-7
HYSSR	C-3d	C-9
RESOP	C-3e	C-10
HLDPA	C-3f	C-11
HYSYS	C-3g	C-13
Hybrid Method	C-4	C-14
General	C-4a	C-14
DURAPLOT	C-4b	C-15

Subject	Paragraph	Page
APPENDIX D CALCULATIONS FOR FLOW-DURATION METHOD EXAMPLE		
General	D-1	D-1
Total Energy Potential	D-2	D-1
Usable Generation	D-3	D-1
Effect of Fixed Overall Efficiency and Fixed Full Gate Discharge Assumptions	D-4	D-4
Peaking Flow-Duration Curve	D-5	D-8
Peaking Capacity-Duration Curve	D-6	D-10
Turbine Efficiency	D-7	D-12
APPENDIX E DAILY SEQUENTIAL ROUTING		
General	E-1	E-1
Basic Data	E-2	E-1
Powerplant Characteristics	E-3	E-2
General	E-3a	E-2
Head Range	E-3b	E-2
Rated Capacity	E-3c	E-3
Hydraulic Capacity and Efficiency vs. Head	E-3d	E-4
Computation of Energy Output	E-4	E-6
General	E-4a	E-6
Rules for Selection of Daily Discharge	E-4b	E-6
Routing for March 1982	E-4c	E-6
APPENDIX F USE OF THE MASS CURVE METHOD TO IDENTIFY THE CRITICAL PERIOD		
General	F-1	F-1
The Mass Curve	F-2	F-3
Procedure and Example	F-3	F-3
Firm Yield Curve	F-4	F-4
Maximum Firm Yield for Given Storage Volume	F-5	F-4
Use of the Mass Curve to Estimate Firm Energy	F-6	F-5
APPENDIX G KW/CFS CURVE COMPUTATION		
Introduction	G-1	G-1
Example	G-2	G-1
Assumptions	G-2a	G-1

Subject	Paragraph	Page
Procedure for Developing kW/cfs vs. Head Curve	G-2b	G-2
Procedure for Developing kW/cfs vs. Reservoir Elevation Curve	G-2c	G-3
Treatment of Alternative Plant Loadings	G-3	G-4
 APPENDIX H FIRM ENERGY ESTIMATE FOR A STORAGE PROJECT		
Introduction	H-1	H-1
General	H-1a	H-1
Project Characteristics	H-1b	H-1
Computation of Preliminary Firm Energy Output	H-2	H-1
Procedure	H-2a	H-1
Example	H-2b	H-3
Initial Critical Period Hand Routing . . .	H-3	H-5
General	H-3a	H-5
Example Calculation	H-3b	H-7
Adjustment of Firm Energy Output	H-4	H-10
Introduction	H-4a	H-10
Procedure	H-4b	H-10
Example of Firm Energy Output Recalculation	H-4c	H-11
Final Firm Energy Estimate	H-5	H-16
 APPENDIX I SSR REGULATION USING ALTERNATIVE OPERATING STRATEGIES		
Introduction	I-1	I-1
Case 1: Routing to Protect Firm Energy Capability	I-2	I-2
Case 2: Rule Curve Routing	I-3	I-4
Case 3: Routing With Joint-Use Storage	I-4	I-5
Storage Allocation	I-4a	I-5
Firm Energy Output	I-4b	I-5
Monthly Firm Energy Requirements . . .	I-4c	I-5
Operation in an Average Water Year . .	I-4d	I-7
Shifting Secondary Energy to Peak Demand Months	I-4e	I-7
Use of Secondary Conservation Storage	I-4f	I-8
At-Site Recreation	I-4g	I-10
Multiple-Purpose Rule Curves	I-4h	I-10
Case 4: Routing to Maximize Average Energy	I-5	I-10

Subject	Paragraph	Page
Case 5: Routing to Maximize Energy		
Benefits	I-6	I-10
Case 6: Maximize Dependable Capacity . .	I-7	I-11
APPENDIX J CONSTRUCTION OF A RULE CURVE FOR SINGLE-PLANT POWER OPERATION		
General	J-1	J-1
Single-Year Rule Curve	J-2	J-1
Rule Curve Based on Multi-Year Critical Period	J-3	J-3
APPENDIX K APPLICATION OF THE HEC-5 HYDROPOWER ROUTINES		
Introduction	K-1	K-1
Purpose and Scope	K-1a	K-1
Program Purpose	K-1b	K-1
Program Documentation	K-1c	K-1
Program Capabilities and Limitations . . .	K-2	K-2
Introduction	K-2a	K-2
Reservoir System Description	K-2b	K-2
Reservoir Description	K-2c	K-3
Reservoir Purposes	K-2d	K-3
Reservoir Operation	K-2e	K-3
Time Interval and Duration	K-2f	K-5
Operation Parameters	K-2g	K-7
Data Requirements	K-2h	K-8
Storage and Yield Optimization	K-2i	K-9
Economic Capabilities	K-2j	K-10
Application to Analysis of a Single Hydropower Project	K-3	K-10
General	K-3a	K-10
Power Reservoirs	K-3b	K-10
Data Requirements	K-3c	K-11
Program Operation	K-3d	K-13
Program Output	K-3e	K-15
Analysis of Hydropower Systems	K-4	K-16
General	K-4a	K-16
Data Requirements	K-4b	K-16
Program Operation	K-4c	K-17
Program Output	K-4d	K-18
Analysis of Pumped-Storage Projects . . .	K-5	K-18
General	K-5a	K-18

Subject	Paragraph	Page
Data Requirements	K-5b	K-19
Program Operation	K-5c	K-19
Program Output	K-5d	K-21
Firm Energy Optimization	K-6	K-21
General	K-6a	K-21
Data Requirements	K-6b	K-21
Program Operation	K-6c	K-22
Program Output	K-6d	K-22
Strategies for Using the HEC-5 Program for		
Power Studies	K-7	K-23
General	K-7a	K-23
Large Storage Projects	K-7b	K-23
Pumped-Storage Projects	K-7c	K-24
Run-of-River Projects	K-7d	K-24
Program Availability	K-8	K-25
Introduction	K-8a	K-25
Program Distribution	K-8b	K-25
HEC Maintained Files	K-8c	K-25
Program Support	K-8d	K-26
APPENDIX L CALCULATIONS FOR STORAGE EFFECTIVENESS ANALYSIS		
Introduction	L-1	L-1
Case 1: Upstream Reservoir in Tandem . .	L-2	L-1
Case 2: Two Identical Reservoirs		
in Parallel	L-3	L-4
Case 3: Parallel Reservoirs, One with		
Downstream Powerplant	L-4	L-5
Case 4: Parallel Reservoirs with Unequal		
Flow	L-5	L-8
Case 5: Parallel Reservoirs of Unequal		
Slope	L-6	L-11
APPENDIX M EXISTING MULTIPLE-PURPOSE SYSTEMS IN THE		
UNITED STATES		
Introduction	M-1	M-1
Cumberland River System	M-2	M-2
Tennessee River System	M-3	M-9
Arkansas River System	M-4	M-16
Missouri River System	M-5	M-23
Colorado River System	M-6	M-33
Central Valley Project	M-7	M-44
Columbia River System	M-8	M-52

Subject	Paragraph	Page
APPENDIX N EXAMPLES OF HOURLY STUDIES		
General	N-1	N-1
Case 1: Pondage Analysis	N-2	N-1
General	N-2a	N-1
Project Data	N-2b	N-1
Preliminary Estimate of Sustained		
Peaking Capacity	N-2c	N-3
Hand Routing	N-2d	N-3
Case 2: Reregulating Reservoir Analysis	N-3	N-4
General	N-3a	N-4
Regulation of the Peaking Project . . .	N-3b	N-4
Reregulating Reservoir Storage		
Requirement	N-3c	N-6
Additional Storage Required for a		
Three-Day Weekend	N-3d	N-6
Pumped-Storage Reservoir	N-4	N-6
General	N-4a	N-6
Project Data	N-4b	N-8
Hand Routing	N-4c	N-8
APPENDIX O CAPACITY CREDIT, INTERMITTENT CAPACITY, AND ENERGY VALUE ADJUSTMENTS		
Introduction	O-1	O-1
Power Benefit Analysis	O-1a	O-1
Source of This Material	O-1b	O-1
Capacity Value Adjustments and		
Intermittent Capacity	O-2	O-1
Introduction	O-2a	O-1
The Capacity Benefit Equation	O-2b	O-2
Hydrologic Availability	O-2c	O-3
Mechanical Availability	O-2d	O-5
Flexibility	O-2e	O-11
Implementation	O-2f	O-12
Energy Value Adjustment	O-3	O-14
Conceptual Basis of Energy Value		
Adjustment	O-3a	O-14
Methods for Calculating Adjustment . .	O-3b	O-14
System Models	O-3c	O-14
Equations	O-3d	O-15
Impact of Adjustment	O-3e	O-16
Selection of Method	O-3f	O-16

Subject	Paragraph	Page
APPENDIX P FUEL COSTS AND FUEL COST ESCALATION		
General	P-1	P-1
Base Fuel Costs	P-2	P-1
Fossil-Fueled Plants	P-2a	P-1
Nuclear-Fueled Plants	P-2b	P-6
Real Fuel Cost Escalation	P-3	P-6
Current Procedures	P-3a	P-6
Forecast Uncertainty	P-3b	P-6
Forecast Sources	P-3c	P-7
Escalation Rate Applications	P-3d	P-12
Use of the Multipliers	P-3e	P-13
Actual and Forecast Price Differences	P-3f	P-18
APPENDIX Q SYSTEM POWER BENEFITS		
Introduction	Q-1	Q-1
Single-Reservoir System	Q-2	Q-1
System Description	Q-2a	Q-1
At-Site Benefits	Q-2b	Q-3
Cost Allocation	Q-2c	Q-4
Benefit Allocation	Q-2d	Q-5
Project Benefit-Cost Ratios	Q-2e	Q-6
Multiple Storage Projects	Q-3	Q-6
General	Q-3a	Q-6
System Description	Q-3b	Q-6
At-Site Benefits	Q-3c	Q-6
Cost Allocation	Q-3d	Q-7
Benefit Allocation	Q-3e	Q-11
Net Benefits	Q-3f	Q-12
More Complex Systems	Q-4	Q-13
APPENDIX R CONVERSION FACTORS		
Volume	R-1	R-1
Rate of Flow	R-2	R-1
Energy	R-3	R-1
Power	R-4	R-2
Energy Equivalents	R-5	R-2
APPENDIX S GLOSSARY		
	S-1	S-1
APPENDIX T BIBLIOGRAPHY		
	T-1	T-1
APPENDIX U INDEX		
	U-1	U-1
